Automated SOC Operations

Benefits

- Detect, enrich and analyze threats with Devo and react with playbooks-driven responses.
- Shorten investigation time and increase decision-making efficiency by automating key tasks in the analyst review cycle.
- Reduce unnecessary churn with a single platform for triage, investigation, collaboration and incident documentation.

Security operations teams often deploy a multitude of security tools to keep pace with a constantly changing threat and data landscape. But with so many tools, security teams can waste time sharing data from disparate sources and performing repetitive tasks. SOCs need to equip their security teams with rich, contextual data and automate repetitive tasks so their analysts have the time and energy they need for incident resolution.

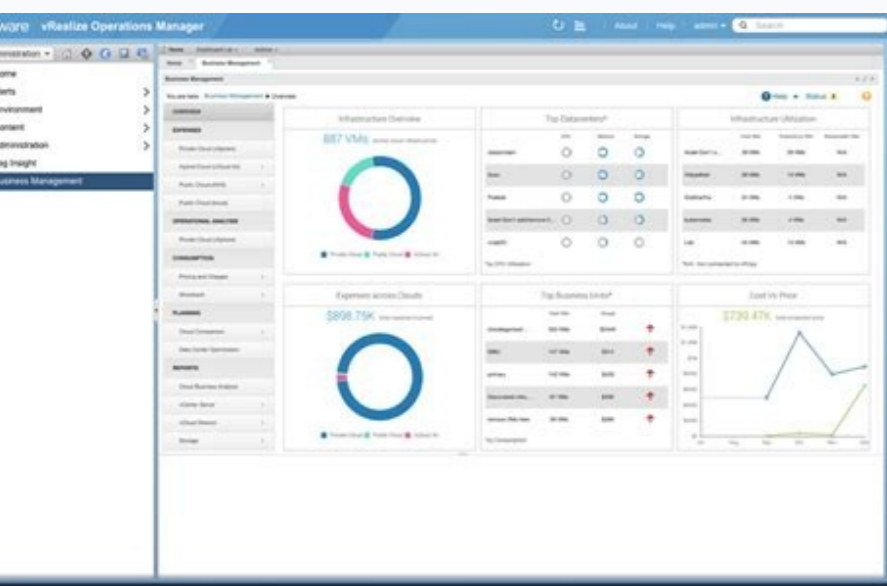

Users can now leverage Demisto's security orchestration and automation capabilities with Devo's real-time, context-rich data insights for efficient incident response.

Integration Features:

- Rich and scalable APIs in Devo and leverage Demisto playbooks to automate and manage analyst responses.
- Enrich all your security data and detect real-time threats with Devo and trigger automated workflows and response with Demisto.
- Leverage hundreds of Demisto third-party product integrations to coordinate response across security functions based on insights from Devo.
- Run 100s of commands (including for Devo) interactively via a ChatOps interface while collaborating with other analysts via Demisto's chatbot.

Compatibility

- Products: Demisto Enterprise, Devo Data Analytics Platform

Introduction

The Dell EMC Virtual Storage Integrator (VSI) for VMware vSphere Web Client is a vCenter plug-in that enables administrators to view, manage, and optimize storage.

Deploy the VSI appliance

To deploy the VSI appliance:

1. Download the latest Solutions Integration Service OVA file from the following location:
https://support.emc.com/products/32161_VSI-Series
2. Log in to the vSphere Web Client.
3. On the **Home** page, go to **Hosts and Clusters**.
4. Right-click the vCenter cluster and select **Deploy OVF Template**.

The following message appears:

This site is using the VMware Client Integration Plug-In. Do you want to allow it to access your operating system?

5. Click **Allow**.

The Deploy OVF Template wizard appears.

6. At **Select source**, enter the location of the Solutions Integration Service OVA file, and then click **Next**.
7. On the **Review details** page, verify that the information is correct, and then click **Next**.
8. Accept the End User License Agreement (EULA), and then click **Next**.
9. At **Select name and folder**, enter a name for the destination folder if you want to change it from the default location.
10. Select the folder or datacenter location where you want to save the Solutions Integration Service OVA file, and then click **Next**.
11. At **Select a resource**, select the compute resource, and then click **Next**.
